Offer

SOFTWARE SOLUTION FOR AUTOMATIZATION AND CONTROL OF PURCHASE AND PROCESSING OF AGRICULTURAL PRODUCTS

Morena's software FrutIS is designed for monitoring the operations of enterprises engaged in purchasing and processing of agricultural products. It is designed to provide quick and thorough documentation of processes related to the purchase and processing of agricultural products. In addition to providing effective monitoring of financial and material flows, one of the goals is also to meet prescribed international standards relating to the processing of fruit, the observance of which is a condition for food exports to the European market.
